

Pond and Lake Restoration

Pond and Lake Management

Left untended reeds and aquatic plants can completely take over a pond, lake or watercourse, leaving you with an unsightly, stagnant water feature instead of the attractive and functional body of water you might hope for. In time terrestrialisation will occur.

Our expertise is in lake restoration and pond restoration breathing new life into your water course. Using a range of methods to refurbish, enhance or regenerate your area of water to its former glory.

From basic maintenance or enhancement to complete restoration, from large domestic garden ponds to commercial lakes and waterways, we offer the following services for your watercourse to get it looking great again:

- **Pond Restoration**
- **Lake Restoration**
- **Silt Pumping and Dredging**
- **Aquatic Weed Control**
- **Reed and Bulrush Control**
- **Water Lily Control**
- **Marginal Reed Beds**

Full Range of Services Carried Out:

- Site Survey
- Site Report with Proposals and Solutions
- Tree felling
- Strimming, Pruning and Mowing
- Invasive Weed Eradication
- General Weed Spraying
- General Landscaping
- Digger Work

Aquatic Solutions UK use specialist machines manufactured in Sweden, known as Truxors. They are amphibious, extremely versatile and lightweight. Being lightweight, this enables them to drive across lawns and other sensitive areas where other heavy machines cannot. Many weed cutting boats have to be taken by trailer to the waters edge before they are unloaded or craned into the water. Being amphibious this does not apply to our machines.
